

# Internet resilience

Udo Helmbrecht

Executive Director, ENISA

Simulation techniques, Munich, 26/01/2015

# Agenda

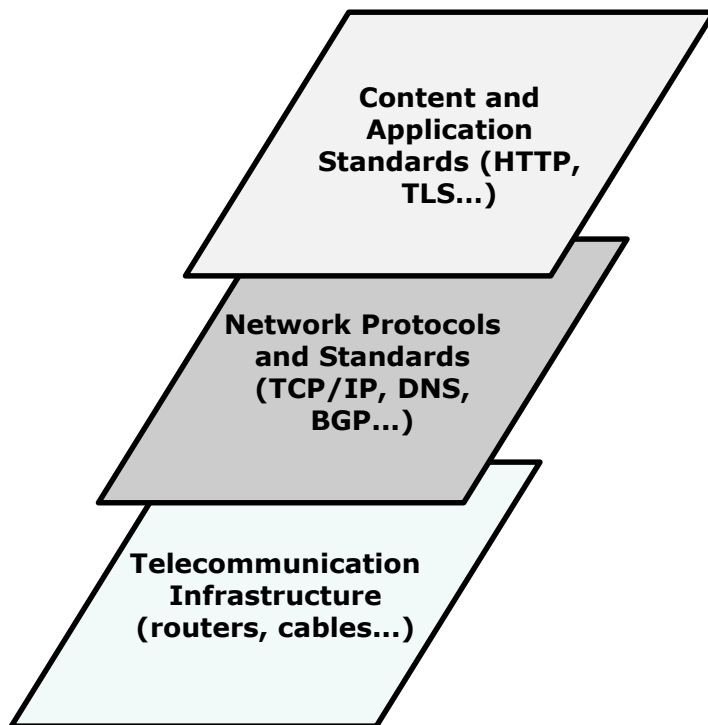

- Today's Challenges
  - Current Internet Infrastructure Threats
  - ENISA Activities
- Cloud Security Challenges
  - Risk Assessment in the cloud
  - Governmental Clouds
  - Cloud Security Certification
- Big Data- New topic, new challenges

# IT Security:

- Confidentiality
- Integrity
- Availability

There is increasing reliance on communication networks

There is an emerging threat environment hampering the availability, integrity and confidentiality of networks based on:

- Infrastructure vulnerabilities
- Interdependencies
- Privacy concerns
- Growing threat landscape

# ENISA activities

Latest released **study**:

- **Threat Landscape and Good Practice Guide for Internet Infrastructure** to give an overview of emerging threats and good practices to face large scale incidents such as amplification attacks and route hijacks

**Flash Notes** in case of large scale incidents:

- 2013 DNS amplification attacks, 2014 NTP reflection attacks, Heartbleed, Shellshock...

**Community** engagement:

- INFRASEC - **Internet infrastructure security and resilience reference group**: experts from Internet operations to discuss current threats and future challenges to secure European networks.

# ENISA Threat Landscape Report

Figure 4 – Threat taxonomy of the Internet infrastructure (levels 1 and 2 - see Annex C for the expanded mind map)

<http://www.enisa.europa.eu/activities/risk-management/evolving-threat-environment/iitl>

# Current Internet infrastructure threats

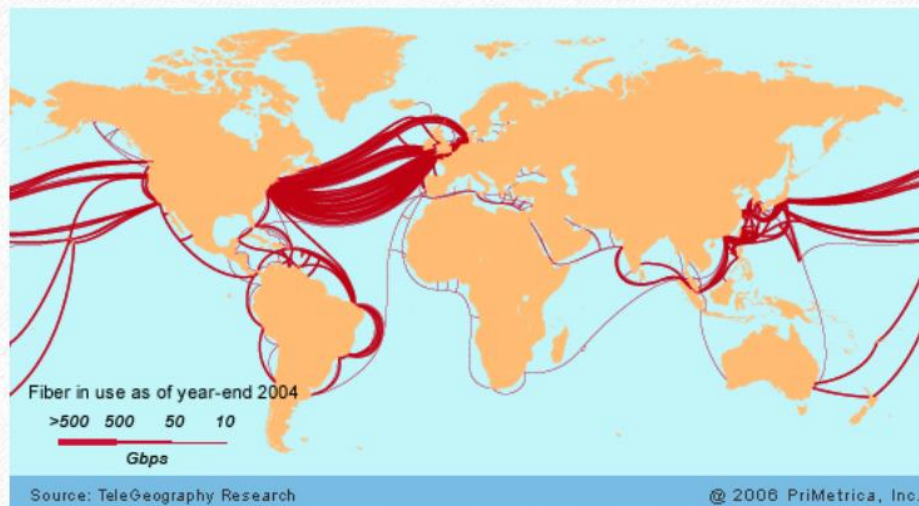

Threat groups	Threat types	Trends
<b>Routing Threats</b>	Nefarious Activity/Abuse	Increasing ↑
	Eavesdropping/Interception/Hijacking	Increasing ↑
<b>DNS Threats</b>	Nefarious Activity/Abuse	Decreasing ↓
<b>Denial of Service</b>	Nefarious Activity/Abuse	Increasing ↑
<b>Generic Threats</b>	Physical attack	N/A
	Damage/Loss	Increasing ↑
	Failures/Malfunctions	Increasing ↑
	Nefarious activity/Abuse	Increasing ↑
	Eavesdropping/Interception/Hijacking	Increasing ↑

# Saboteurs Cut Undersea Internet Cable Near Egypt

IDG News Service – Egypt said it has arrested three men suspected of slicing a crucial undersea Internet cable on Wednesday, causing widespread problems from Kenya to Pakistan.

The South East Asia-Middle East-West Europe 4 (SEA-ME-WE 4) cable runs 12,500 miles from France to Singapore, with branches connecting telecommunication companies in Malaysia, Thailand, Bangladesh, India, Sri Lanka, Pakistan, United Arab Emirates, Saudi Arabia, Egypt, Italy, Tunisia and Algeria.

28.08.2013 <http://earthfirstjournal.org/newswire/2013/03/28/saboteurs-cut-undersea-internet-cable-near-egypt/>

## Assets

Physical	Logical
<ul style="list-style-type: none"> <li>• Landing stations</li> <li>• Undersea cables</li> <li>• Buried cables</li> <li>• Colocations sites</li> <li>• Internet Exchange points</li> <li>• Generic provider infrastructure</li> </ul>	<ul style="list-style-type: none"> <li>• IP address</li> <li>• IP blocks of addresses</li> <li>• Autonomous System Numbers (ASNs).</li> <li>• Routes</li> <li>• DNS infrastructure</li> <li>• Uniform resource locators (URLs)</li> </ul>

## Routing Tables

### Routing Table for R1a:

10.0.1.0–10.0.1.255 Local  
 10.0.2.0–10.0.2.255 Path: 2 via R2a  
 10.0.3.0–10.0.3.255 Path: 3 via R1b  
 10.0.4.0–10.0.4.255 Path: 4 via R1c  
 or Path: 2, 4 via R2a

### Routing Table for R1b:

10.0.1.0–10.0.1.255 Local  
 10.0.2.0–10.0.2.255 Path: 2 via R1a  
 10.0.3.0–10.0.3.255 Path: 3 via R3b  
 10.0.4.0–10.0.4.255 Path: 4 via R1c  
 or Path: 3, 4 via R3b

### Routing Table for R2a:

10.0.1.0–10.0.1.255 Path: 1 via R1a  
 10.0.2.0–10.0.2.255 Local  
 10.0.3.0–10.0.3.255 Path: 1, 3 via R1a  
 or Path: 4, 3 via R2b  
 10.0.4.0–10.0.4.255 Path: 4 via R2b  
 or Path: 1, 4 via R1a

### Routing Table for R2b:

10.0.1.0–10.0.1.255 Path: 1 via R2a  
 or Path: 4, 1 via R4b  
 10.0.2.0–10.0.2.255 Local  
 10.0.3.0–10.0.3.255 Path: 4, 3 via R4b  
 or Path: 1, 3 via R2a  
 10.0.4.0–10.0.4.255 Path: 4 via R4b

# Example of a Flash-Note

## Large scale UDP attacks: the 2014 trend and how to face it

Flash Note 02, 24th February 2014

UDP (User Datagram Protocol)	
Familie:	Internetprotokollfamilie
Einsatzgebiet:	Verbindungslose Übertragung von Daten über das Internet
UDP im TCP/IP-Protokollstapel:	
Anwendung	DNS DHCP ...
Transport	UDP
Internet	IP (IPv4, IPv6)
Netzzugang	Ethernet Token Bus Token Ring FDDI ...

“Recent news show the increase of large scale attacks<sup>1</sup> exploiting specific vulnerabilities of the Internet core protocols. In the latest cases, the Network Time Protocol (NTP), which allows synchronizing devices to the coordinated universal time (UTC), has been misused. Specifically, in December 2013, a vulnerability in this UDP protocol became mainstream and started to be exploited for large scale reflection attacks leading to a dramatic increase of the size of denial of services. Luckily, network providers can already put in place a series of known countermeasures to mitigate these threats, as ENISA underlined also for amplification attacks in April 2013.

...

“

# Securing European networks

- Evaluate your current level of security by understanding the assets covered (and not covered) by existing security measures.
- Evaluate the application of adapted good practices in a focused manner.
- Cooperate with the network community to exchange on threats and promote the application of good practices as mitigation measures.
- Report on implementations of good practices, assets covered and gaps found.
- Words matter: Ensure the right use of terms and definitions.

# Securing European networks

- Use proper risk assessment methods to understand vulnerable assets in your Internet infrastructure and prioritise your protection actions.
- Build an information and communication technology security awareness and training program.
- Commit third-party vendors to apply security measures.
- Stay current on any update

## ISPs in Europe (examples)

<http://www.internetanbieter.eu>

## IXPs in Europe

<http://www.ixptoolkit.org>

# The importance of IXPs in Europe

- Largest IXPs carry on a daily basis traffic volumes in the petabyte range, similar to what some of the largest global ISPs reportedly handle
- End-to-end flow of traffic in today's Internet has to include as key component the IXPs and the networks that peer at those IXPs
- Critical for understanding how content is distributed in today's Internet and how the different parties (e.g., content providers, CDNs, ISPs) are adapting

Total aggregated traffic growth in the Euro-IX region (in Gbps) in 2014 - Source: Euro-IX IXPs Traffic Statistics 2014 summary

# RegTelCo-Incident-Reporting by ENISA

- 1st report in 2012 (Art 13a TelCo Reg., on 2011's incidents - 51)
- 2nd report in 2013 (on 2012's incidents);
- 79 incidents from 18 countries,
- 9 countries without incidents,
- 1 country without implementation (9 in 2011)
- Most incidents affect mobile comms (50% of incidents, 1.8 Mn/incident)
  - Natural disaster, power cuts  
outages affected 2.8 Mn/incident
- Ca 40% impact on emergency  
number 112

# Governmental Clouds (1/2)

## 2010: Guide on security and resilience for Governmental Clouds

- Presentation of the security benefits and drawbacks for the public sector to go in the cloud
- First steps need to be done towards taking the decision to go cloud

## 2013: Good practice guide on how to securely deploy Governmental Clouds

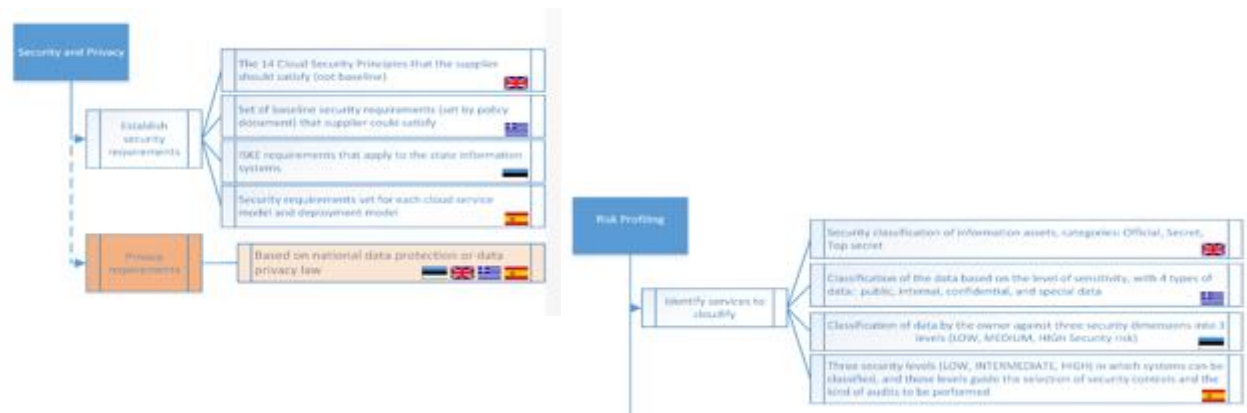

- Definition of a governmental cloud (in a mature market)
- State of cloud computing adoption in the EU public sector
- Case studies of different approaches in adopting a cloud solution

## 2014: Security framework for Governmental Clouds

- Security (and privacy) framework for the public administration to adopt cloud computing
- The framework presents the **4 phases (PDCA)** – **9 activity domains**- **16 security** steps from the pre-procurement phase till the finalization of the contract and exit, covering all the roles and the tasks with use cases.

- Cloud Certification Schemes List (CCSL): List of existing certification schemes
  - 12 Certification schemes included
  - Powered by ENISA, supported by the EC and the Cloud Selected Industry Group (CSIG)
- Cloud Certification Schemes Meta-framework (CCSM): Meta-framework based on existing certification schemes
  - Mapping detailed ICT security requirements of the public sector in the EU (11 countries and more will come)
  - MATRIX will results to be used for procurement

**Scheme mapping**  
Select the criteria that matter to you

CCSM security objectives	Description
1. Information security policy	Cloud provider establishes and maintains an information security policy.
2. Risk management	Cloud provider establishes and maintains an appropriate governance and risk management framework, to identify and address risk for the security of the cloud services.
3. Security roles	Cloud provider assigns appropriate security roles and security responsibilities.
4. Security in Supplier relationships	Cloud provider establishes and maintains a policy with security requirements for contracts with suppliers to ensure that dependencies on suppliers do not negatively affect security of the cloud services.
5. Background checks	Cloud provider performs appropriate background checks on personnel (employees, contractors and third party staff) if required for their duties and responsibilities.
6. Security knowledge and training	Cloud provider verifies and ensures that personnel have sufficient security knowledge and that they are provided with regular security training.
7. Personnel changes	Cloud provider establishes and maintains an appropriate process for managing changes in personnel or changes in their roles and responsibilities.
8. Physical and environmental security	Cloud provider establishes and maintains policies and measures for physical and
9. Security of supporting utilities	
10. Access control to networks and information systems

# Big Data: new topic, new challenges?

Big Data: Collection of data sets so large that its management and use present significant challenges

## Security Challenges:

- Infrastructure Security
- Secure data storage and transactional logs
- Continuous monitoring and audit
- Validity and governance
- Data privacy (for mining and analytics)

In 2015 ENISA will study the Security and Resilience of Big Data
